## NEW DAILY TOURYS

The New Daily Tourys comes as an enriched version of the previous one, **with new high-level standard features**. Both exterior and interior have been upgraded to provide **even more comfort** and highlight an exclusive design making the **New Daily Tourys as special as its guests**.

Interior advanced features include **new high comfort seats** that give to passengers the feeling **to travel in first class**. Maximum brightness is provided by the panoramic windscreen and LED lighting enhancing **on-board wellbeing** and visibility. For more comfort of travel, the New Daily Tourys is equipped with new standard individual lights and air conditioning vents.

The **lowered luggage compartment** with 2.5 m<sup>3</sup> capacity and the **internal luggage racks** allow **New Daily Tourys** to have **the best-in-class total luggage compartment of its category**. Thanks to the high quality pantograph rear door opening, the luggage door occupies very little space and facilitates the upload of the luggages even in small area: another unique feature for vehicles in this category.

The main improvements concerning the external part of the vehicle consist in **high-end new molding with the vehicle's logo** on side sliding door rail. The vehicle is also equipped with **new wheel covers** to reinforce its **attractive design**.

With **the exclusive 8-speed HI-MATIC automatic gearbox** as standard equipment, the **New Daily Tourys** provides **excellent performance, maximum comfort** and the **automatic upgrade** for any mission.

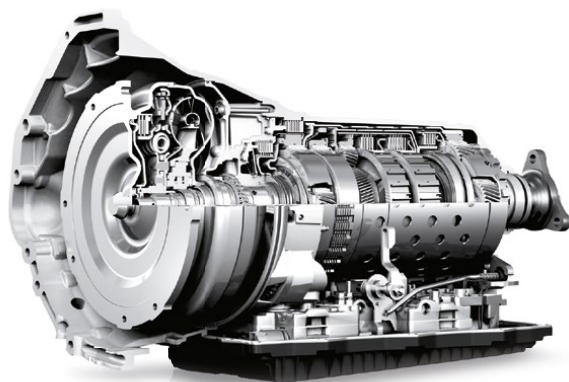

## AUTOMATIC UPGRADE: MORE SPRINT WITH HI-MATIC

**THE NEW DAILY TOURYS IS EQUIPPED IN STANDARD CONFIGURATION WITH THE INNOVATIVE 8-SPEED HI-MATIC GEARBOX**

The HI-MATIC automatic gearbox is designed to ensure maximum performance, minimal running costs, unbeatable comfort and superior gear changes, along with reduced fuel consumption. Thanks to its 8 gear ratios, gear change is quicker and more precise when compared to standard 6-gear models, because it ensures that only the correct gear is engaged at whatever engine speed, in less than 200 milliseconds. As an option, the Daily Minibus, equipped with HI-MATIC automatic gearbox, can be fitted with an electronic retarder a winning combination which enhances safety on hilly and mountainous roads.

Electronic control allows for two operating modes, which are functional to the specific mission needs:

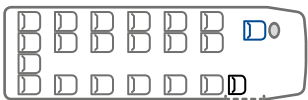

- ⊕ ECO – for smooth, low-speed gear shifting to enhance comfort and keep fuel consumption low
- ⊕ POWER – for faster, higher speed gear shifting to achieve more precise gear engagement and a sporty driving style

HI  MATIC

WHEELBASE (mm)	OVERALL LENGTH (mm)	ENGINE POWER (hp)	MODEL	DRIVING POSITION	OVERALL HEIGHT (mm)	GVW (kg)	GEARBOX
